I. ISSUES

After much more hours of work on this project, my computer (Kevin) died as you can see just after.

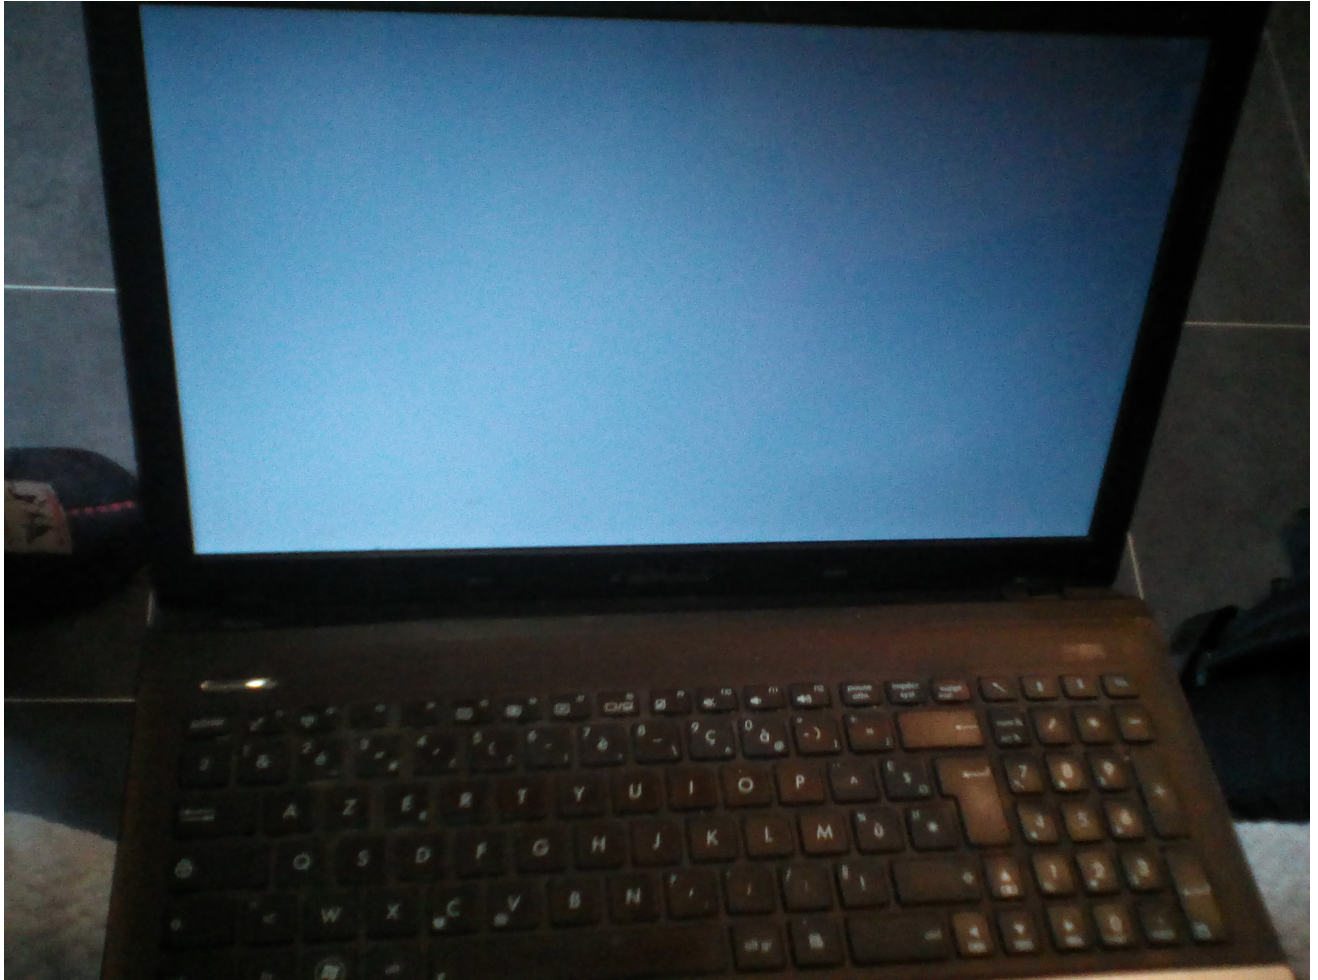

FIG. 1: Rest In Peace

Then, we started to improve the interface of the project by creating some different windows in view of simplify the usage of it. The idea will be to open a window after each step of working. For example, the first step will be to open the .ply files. When the user will clic on the button "open" it will open a dialogBox to choose the files and open a window and so on. You can check the beginning of our code on the github repository.
